Water treatment innovations inspired by your lifestyle.

The entire WaterCare® water treatment product line is built with pride in the USA. WaterCare has been dedicated to making water good for life and developing industry-leading innovations for over 60 years.

As a WaterCare dealer, we are part of a select group of certified dealers who exclusively sell and service WaterCare systems. Give us a call and see how we can deliver the highest quality water for you and your family.

Your local, authorized WaterCare dealer:

Everyday essentials begin with great water.

Water. It touches our lives in so many ways. Your family depends on clear, clean, quality water every day for laundry, dishes, bathing, cleaning, cooking and yes, even drinking.

There's a lot of technology and know-how needed to provide the quality water your household deserves. Fortunately, WaterCare® conditioners, softeners, filters and reverse osmosis drinking water systems are designed to do just that.

TotalCare® Conditioners:

TotalCare conditioners use exclusive Crystal-Right media to soften water and contaminants that cause stains throughout your home. It also treats mildly acidic water conditions to help preserve your home's plumbing.

CRYSTAL-RIGHT Advantage

Unlike normal softening resin, these custom engineered crystals effectively filter iron and manganese while softening your water and in some cases, also correcting acidic conditions.

Crystal-Right's durability makes it the perfect pair for our patented chlorine generator, which activates to keep your unit clean.

wripli Compatible with our optional Wripli® WiFi technology.

Twin tank systems available for the busy household

CareSoft Series® Softeners:

CareSoft softeners are designed to be flexible. With highly advanced control systems and eco-friendly features, these softeners offer amazing efficiencies to keep your home running smoothly. Customize your system from one of our options below:

Split tank R/C model available

	CareSoft Elite	CareSoft Pro	CareSoft
IQ ² Technology	✓	✓	✓
Quality Tested Resin	✓	✓	✓
Dry Salt Storage	✓	✓	✓
W.E.T. Compatible	✓	✓	
R/C Available	✓	✓

WaterCare softeners are available as simple, cost-effective models, split tanks to filter city water as it softens, WiFi capable, or maximum efficiency units.

Learn more about the advanced features available by visiting www.WaterCare.com.

Whole House Filtration Systems:

WaterCare whole house filtration systems use the right system and media paired specifically for your household's needs. We have two types of filters to cover whatever water problems you may have.

Air-Charged Filters

Ion Pro® filters combine specialized media and a unique air chamber to put an end to water problems. The air chamber first oxidizes dissolved solids and gasses, changing them into particles that can easily be trapped by the media. These models are excellent at reducing staining from iron and manganese or the rotten egg odors from hydrogen sulfide.

WaterCare filters that utilize air technology come equipped with **Inch Worm** to release air slowly.

For water that needs additional protection, an ozone generator is available to keep the system clean.

Backwashing Filters

CareClear Pro® filters provide specialized media for a variety of solutions to neutralize acidic water, remove chlorine taste and odor, or even eliminate nuisance particles from your home's water.

Drinking Water Systems:

WaterCare drinking water systems use a series of highly effective filters, including a reverse osmosis membrane, to reduce unwanted impurities from your water. Your water will taste better, smell better, even look better.

UltronWater® systems are the solution for convenient, healthy drinking water in your home. With an NSF/ANSI Standard 58 certification, these systems improve the smell, taste and appearance of your tap water by removing:*

- Arsenic
- Fluoride
- Nitrates
- Chromium
- Copper
- Lead
- Cysts
- And more

Clear Flo® systems filter particles and impurities, even those not visible to the eye. Only the best water makes it through the filters to your faucet.

Do not use these systems with water that is microbiologically unsafe or of unknown quality, without adequate disinfection before or after the system. Reverse osmosis technology is typically known to substantially reduce the total dissolved solids in a water supply from 95 to 99%. Results will vary based on feed water quality and temperature. Impurities are not necessarily in your water.

**For specific percentages of contaminant reduction, consult the performance data sheet. This system shall only be used for Arsenic V reduction on chlorinated water supplies containing detectable residual free chlorine at the system inlet. Systems certified for cyst reduction may be used on disinfected water that may contain filterable cysts.*
